

Exception Handling and Batch Release

Problem

Batch release requires evaluation of many data components from multiple data sources. This can lead to batch release mistakes and delays, causing product supply disruptions and potential quality events.

Solution

Utilization of a QRM (Quality Review Manager) software application integrates your automation and manufacturing systems, providing data integrity. With a review-by-exception methodology, quality batches can be released faster, resulting in increased production and decreased inventory.

noesis

A proven process management solutions partner, providing data insights and connectivity across any level of an organization to maximize business decision making.
